

GENITALIA GEL Instructions

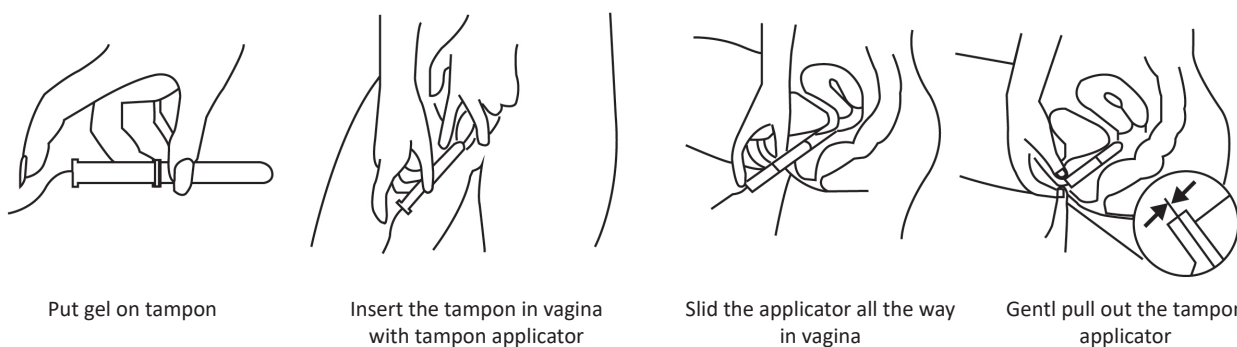

Man

Insert Genitalia Gel to penile opening (urethra) with the empty syringe and hold for 90 minutes a day so the gel can stay in contact with bacteria and germs in the penis. Do this daily for one week. If the gel is thick for insertion to penile opening you can dilute Genitalia Gel with distilled water. Drink two teaspoons of gel mixed with distilled water twice a day for one week or until symptoms subside.

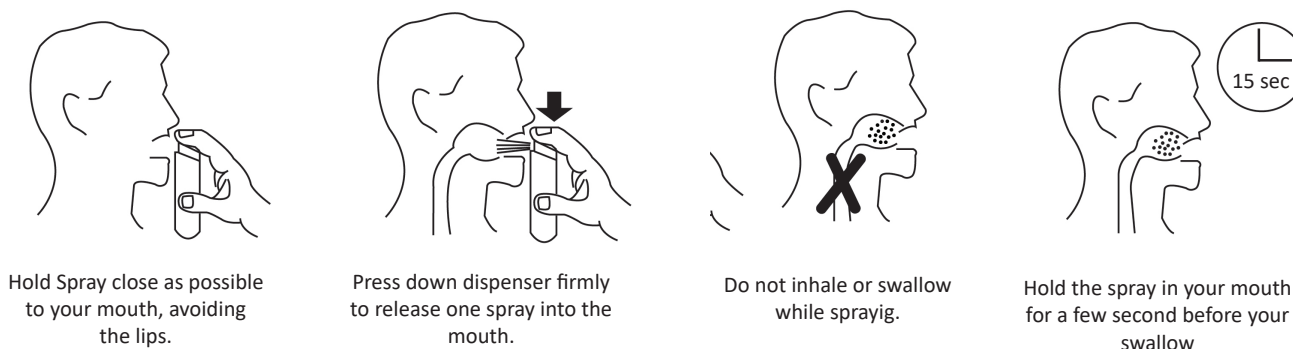

Woman

Apply Genitalia Gel to tip of a tampon and insert into vagina for 90 minutes a day so the gel can stay in contact with germs in the vagina. Do this for one week. Drink two teaspoons of gel mixed with distilled water twice a day for one week or until symptoms subside

Oral

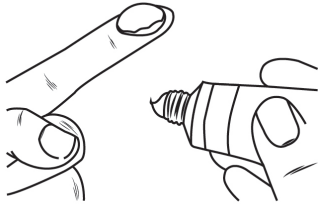

Mix Genitalia Gel with distilled water in an empty spray bottle and spray the mouth and throat to destroy bad bacteria and infection. Gargle and rinse the mouth with the mixture for six minutes before bedtime. Drink two teaspoons of gel mixed with distilled water twice a day for one week or until symptoms subside. Drink two teaspoons of gel mixed with distilled water twice a day for one week or until symptoms subside. This should be done once a day, for one week or until symptoms are gone. Drink two teaspoons of gel mixed with distilled water twice a day for one week or until symptoms subside.

Anal

Apply Genitalia Gel to tip of a tampon or rectal suppositories and insert into rectum for 90 minutes a day so the gel can stay in contact with germs and bacteria in the rectum. Do this for one week. Drink two teaspoons of gel mixed with distilled water twice a day for one week or until symptoms subside.

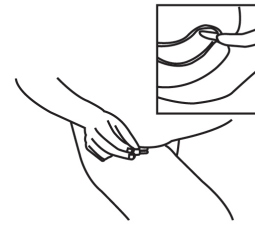

add gel to your fingerprint

add gel to anus with finger,
both inside and outside

you can also use tampon
suppositories

add gel to tampon and keep inside
anus for 90 min

Condoms

In addition to keeping yeast and bacterial infections under control, when used as a personal lubricant on the surface of condoms, silver can kill viruses and sexually transmitted diseases. Use Genitalia Gel on the condom or direct to private parts during sex, to lubricate and destroy the bacteria, viruses and yeast that may be transferred during intercourse. Genitalia Gel will destroy the sexually transmitted diseases like gonorrhea, syphilis, herpes simplex and chlamydia.

Roll the condom on the
to penis

Remove all air bubbles

Stretch the condom

Add gel to all side of
condom
